Physics is Beautiful

From equation 31.15,
the total kinetic energy
operator is given by.

Here, mass of the
particle is , momentum
of the particle is ,
distance of the particle
from the centre of its
orbit is and magnetic
field is .. This is also
equal to the total
energy operator E .

Solutions Chapter 9

(a) To calculate the probability, first divide the time into intervals such that $\tau \gg \Delta t$. Also, when $\Delta t \rightarrow 0$, the term $\frac{\Delta t}{\tau}$, and the value of $\frac{\Delta t}{\tau}$ approaches zero. The probability that no collision occurs in time interval Δt is given by the Drude model to be $e^{-\Delta t/\tau}$. It is important to note that the probability for no collision in interval Δt must hold for each

I guess that you mean
the solutions to the
problems given in the
book "Solid State
Physics" by Ashcroft
and Mermin. I doubt
that the authors have
given the solutions to
their problems.
