Wigington, Grace period 0 HBS Conclusion Questions 1. Multiple muscle system work together to move the body because the nervous system sends signals to the muscular system to react to a stimulus. In order for the body to react to the stimulus, the muscles must undergo the process of the sliding filament theory for the muscles to contract and relax. 2. Calcium plays a major role in the contraction of a muscle, which is why drinking milk doesn't only help strengthen muscles.
